Immunology and Cell Biology (1994) **72**, 525–528

Subject Index

Abelson virus mutants; used to transform immature B cell lines 75
Abstracts; Proceedings of the Australasian Society for Experimental Pathology, 1994 A1
activation antigen; characterization of 13
adjuvant formulations; tested in squirrel monkeys 169
AIDS pathogenesis; role of co-selection in (Theoretical) 338
allograft rejection; effects of anti-inflammatory compounds on 367
antibodies, antipeptide; to murine interferon-alpha 234
antibody binding sites; in lupus autoantibodies (Theoretical) 513
antibody production; regulation by nitrogen oxides 241
antibody response; following antigenic immunization 169
anti-DNA autoantibodies; in systemic lupus erythematosus (Theoretical) 513
antigen, leucocyte surface membrane; characterization of 49
anti-IgM antibody; growth inhibition of a B lymphoma cell line by 205
anti-inflammatory compounds; effect on allograft rejection 367
anti-MHC class II antibodies; growth inhibition of a B lymphoma cell line by 205
antipeptide antibodies; to murine interferon-alpha 234
antiviral cytokines; and evolution of viruses (Theoretical) 347
apoptosis
  and changes in intracellular calcium ion concentrations 489
  a flow cytometric study of 35
arthritis, adjuvant; attenuation by treatment with oxygen radical scavengers 406
arthritis, rheumatoid; T cell oligoclonality in 7
autoantibodies
  novel structural features of (Theoretical) 513
  specific for the Golgi complex 123
autoantigens, Golgi; recognized by autoimmune sera 123
autoimmunity; and failed calibration of cells (Theoretical) 508

B cells; development of (Theoretical) 508
B-lymphoblast-lytic activity; of lymphokine-activated killer cells 375
B lymphoma cell line; growth inhibition of 205
bacterial colonization patterns; in bronchitis 143
beta-2 integrins; role in glomerular injury 471
blood, cord; comparison with adult blood (Brief Comm.) 440
blood groups; Gerbich-negative 23
breast milk, human; T cells and soluble immune factors in 306
bronchitis, recurrent acute; prediction of 143

C3 deposition; on CD4 positive cells coated with recombinant gp120 461
calcium ion concentrations, intracellular; and apoptosis 489
capillary permeability; in Japanese encephalitis 200
capsaicin; and mucosal mast cell activation 230
carcinogen, chemical; and epithelial Langerhans' cell migration 79
carcinoma cells, human colorectal; T cell killing of 275
carrier molecules; tested in squirrel monkeys 169
castanospermine; effects on allograft rejection and elicited peritoneal exudates 367
catalase; in streptozotocin-induced diabetic rats 109
cation imbalance; in erythrocytes in malaria 286
CD16; molecular associations of, in natural killer cells 87
CD45
  expression in natural killer lymphocytosis 500
  and modulation of thymocyte proliferation 292
  molecular associations of, in natural killer cells 87
CD59 upregulation; following cell activation 222
cell activation; followed by upregulation of CD59 222
cell adhesion molecules; in glomerulonephritis 471
cell cycle
  effect of insulin-like growth factor-1 on 300
  flow cytometric study of 35
chemotactic activity, neutrophil; assay for 249
chronic obstructive lung disease; bronchitis in 143
complement
  activation of 461
  regulation by CD59 222
cord blood; comparison with adult blood (Brief Comm.) 440
COS cells; thrombomodulin-transfected 480
co-selection; in immune network theory and in AIDS pathogenesis (Theoretical) 338
cyclic expression; of B220 antigen in immature B cell lines 75
cyclophosphamide; suppression of immune response by 419
cyclosporine; and renal graft survival 455
cytokines
  antiviral, and evolution of viruses (Theoretical) 347
  genes for, and viral infection 383
  in human breast milk 306
  production of, in chicken 115
  redundancy and specificity of (Theoretical) 97
cytomegalovirus infection; of vascular endothelial cells (Brief Comm.) 187
cytotoxic cells, natural; phenotype and morphology of 161
cytotoxic T cells; and MHC restriction (Review) 447

decay accelerating factor; role in complement activation 461
decidua; and immunoregulation 153
diabetes; induced in rats by streptozotocin 109
dimethylsulfoxide; in treatment of adjuvant arthritis 406
dimethylthiourea; in treatment of adjuvant arthritis 406
DNA content; in flow cytometry 35

egg, zona-free hamster; inhibition of penetration of 1
encephalitis, Japanese; vascular effects of 200
endocytosis; of thrombomodulin 480
endothelial cells; infected by cytomegalovirus (Brief Comm.) 187
eosinophilia; associated with vaccination against *Oesophagostomum radiatum* 333

epidermal Langerhans' cells; and intradermal infection with vaccinia virus constructs 383
epithelial cells, thymic; production and characterization of 57
epitopes, T cell; and mycobacterial infection 215
Eptatretus stouti; opsonic receptor on leucocytes from 326
erythrocytes; and *Plasmodium falciparum* infection 286
eukaryotic cells; and regulation of transcription (Theoretical) 177
evolution; of unique immune evasion strategies by viruses (Theoretical) 347

factor H; in complement activation 461
fertilization; inhibition of, by anti-sperm monoclonal antibodies 1
flow cytometry
a model of cell death using 35
of natural cytotoxic cells 161
fluorescence energy transfer; on live cells 319
fucoidan; effects on allograft rejection and elicited peritoneal exudates 367

gamma chains; molecular associations of, in natural killer cells 87
gene expression regulation; in eukaryotic cells (Theoretical) 177
gene inactivation; of a cytokine or cytokine receptor (Theoretical) 97
genetic variation; in non-obese diabetic mice 137
Gerbich-negative blood group; in Papua New Guinea 23
gliotoxin; and apoptosis in thymocytes 489
glomerulonephritis; and beta-2 integrins 471
glutathione levels; in streptozotocin-induced diabetic rats 109
glutathione-reductase; in streptozotocin-induced diabetic rats 109
glutathione-*S*-transferase; in streptozotocin-induced diabetic rats 109
glycophorin C gene; and the Gerbich-negative blood group 23
Golgi complex; and anti-Golgi autoantibodies 123
gp120, recombinant; and complement activation 461
graft survival, renal; and HLA-A matching 455
graft versus host disease; decreased severity after cord blood transplantation (Brief Comm.) 440
granulocyte-CSF; and cytomegalovirus infection (Brief Comm.) 187
granulocyte-macrophage-CSF; and cytomegalovirus infection (Brief Comm.) 187
growth inhibition; of a B lymphoma cell line 205

haemochromatosis; possible gene products of (Theoretical) 435
Haemophilus influenzae, non-serotypable; in bronchitis 143
hagfish, Pacific; opsonic receptor on leucocytes from 326
heat shock protein
mycobacterial, expression on Meth A tumour cells 415
and a *Mycobacterium leprae*-specific T cell epitope 215
HIV; and complement regulation 461
HLA-A matching; and renal graft survival 455
HLA-A3 antigen; and hereditary haemochromatosis (Theoretical) 435
hormones, sex; effect on proliferation of thymic epithelial cells 193
host–parasite relationship; in bronchitis 143
hydroxyl radical; role in mediation of joint inflammation in arthritis 406

interferon-alpha; antipeptide antibodies to 234
immune factors, soluble; in human breast milk 306
immune network theory; co-selection in (Theoretical) 338
immune response
development in chicken 115
recovery of, after cyclophosphamide 419
immunity
and inflammation (Theoretical) 262
mucosal, to Shiga toxin in mice 69
immunization; of squirrel monkeys to test adjuvants and carriers 169
immunodeficiency; and failed calibration of cells (Theoretical) 508
immunoglobulin; joining region and variable region (Theoretical) 513
immunosuppression; by lymphokine-activated killer cells 375
inducible gene expression; in eukaryotic cells (Theoretical) 177
infections; and cytotoxic T cells (Review) 447
inflammation
and immunity (Theoretical) 262
of joints in arthritis 406
inflammatory activity; of ovine interleukin-8 in skin 398
insertion sequences, *Mycobacterium*; putative functional domain within (Theoretical) 427
insulin-like growth factor-1; effect on lymphocyte proliferation 300
integrin, beta-2; role in glomerular injury 471
interferon; and evolution of viruses (Theoretical) 347
interleukin-2; and T cell killing of human colorectal carcinoma cells 275
interleukin-8, ovine; cloning, sequencing, expression and inflammatory activity in skin of 398
internalization; of thrombomodulin 480

Japanese encephalitis; vascular effects of 200

L-selectin molecule; association with T cell receptor 319
LAM1-1; association with T cell receptor 319
Langerhans' cells
and intradermal infection with vaccinia virus constructs 383
and migration into and out of lymph nodes 79
LECAM1; association with T cell receptor 319
Leu8; association with T cell receptor 319
leucocyte activation antigen; characterization of 13
leucocyte surface membrane antigen; characterization of 49
leucocytes, peripheral blood; and response to mitogenic factors in seminal plasma 129
leukaemic leucocytes; a surface membrane antigen present on 49
lipid peroxidation; in streptozotocin-induced diabetic rats 109
lupus erythematosus, systemic; autoantibodies in (Theoretical) 513
lymph nodes; and migration of Langherhans' cells 79
lymphocyte differentiation antigens; in non-obese diabetic mice 137
lymphocyte proliferation; effect of insulin-like growth factor-1 on 300
lymphocyte subsets; in cord blood compared to adult blood (Brief Comm.) 440

lymphocytes; calibration of (Theoretical) 508
lymphocytosis
  induced by pertussis toxin (Brief Comm.) 267
  natural killer, and CD45R0 expression 500
lymphokine-activated killer cells; immunosuppression by 375

macrophage-derived neutrophil chemotactic factor; in Japanese encephalitis 200
major histocompatibility complex *see* MHC
malaria; erythrocyte cation imbalance in 286
mannose-6-phosphate; effects on allograft rejection and elicited peritoneal exudates 367
maternal–fetal interface; and immunoregulation 153
membrane attack complex; regulation by CD59 222
metabolism; of tumour-bearing rats on methotrexate 43
Meth A tumour cells; expression of mycobacterial heat shock protein on 415
methotrexate therapy; in tumour-bearing rats 43
MHC; and peptide vaccines in domestic animals (Theoretical) 256
MHC restriction; history of research on (Review) 447
microbicidal assay; for *Pneumocystis carinii* 314
microsatellites; in non-obese diabetic mice 137
milk, human breast; T cells and soluble immune factors in 306
mitogenic factors; in porcine seminal plasma 129
monoclonal antibody
  CMRF-37 recognizes an activation antigen 13
  inhibition of fertilization by 1
  WM65 recognizes a leucocyte surface membrane antigen 49
mucosal immunity; to Shiga toxin in mice 69
mucosal mast cell; activation of 230
multinegative thymocyte proliferation; and modulation by CD45 292
Mycobacterium bovis BCG stress protein; and Meth A tumour cells 415
Mycobacterium insertion sequences; putative functional domain within (Theoretical) 427
Mycobacterium leprae-specific T cell epitope; on 70 kDa heat shock protein 215

natural cytotoxic cells
  at maternal–fetal interface 153
  phenotype and morphology of 161
natural killer cells
  at maternal–fetal interface 153
  molecular associations of CD16, CD45 and zeta and gamma chains 87
natural killer lymphocytosis; and CD45R0 expression 500
necrosis; a flow cytometric study of 35
network theory, immune; co-selection in (Theoretical) 338
neutrophil chemotactic factor; isolated from *Tritrichomonas foetus* 249
neutrophil recruitment; in glomerulonephritis 471
nitric oxide; regulation of antibody production by 241
nitrogen oxides; regulation of antibody production by 241
non-obese diabetic mice
  genetic polymorphisms of 137
  passive transfer of allogeneic spleen cells from 390
  thymic epithelial cell lines derived from 57

Oesophagostomum radiatum; vaccination against 333
oligoclonality; of T cells in peripheral blood in rheumatoid arthritis 7

opsonic receptor; on leucocytes from the Pacific hagfish 326
orogastric immunization in mice; with Shiga toxin 69
oxygen radical scavengers; in treatment of adjuvant arthritis 406

pancreatic islets; targeted for passive transfer of spleen cells 390
passive transfer; of spleen cells 390
peptide vaccines; in domestic animals (Theoretical) 256
pertussis toxin; lymphocytosis induced by (Brief Comm.) 267
phagocytic cells; and *Pneumocystis carinii* 314
Plasmodium falciparum; and cation imbalance in erythrocytes 286
Pneumocystis carinii; measurement of microbicidal activity against 314
polymorphisms; in non-obese diabetic mice 137
polymorphonuclear leucocytes; expression of CD59 by 222
prednisolone; and renal graft survival 455
pregnancy, murine; and immunoregulation 153
priming and tolerance, oral; epitopes in 29
protein C; activation of 480
protein kinase C; role in sex hormone induced cell proliferation 193

receptors, cytokine; redundancy of (Theoretical) 97
recombinant gp120; and complement activation 461
regulation of transcription; in eukaryotic cells (Theoretical) 177
renal graft survival; and HLA-A matching 455
research on thymus; an overview (Burnet Oration) 361
rheumatoid arthritis; T cell oligoclonality in 7

self–non-self discrimination
  evolution of (Theoretical) 262
  in lymphocytes (Theoretical) 508
seminal plasma, porcine; response of peripheral blood leucocytes to mitogenic factors in 129
severe combined immunodeficient mice; passive transfer of non-obese diabetic mouse cells into 390
sex steroid hormones; effect on proliferation of thymic epithelial cells 193
Shiga toxin; stimulation of gastrointestinal antibody to 69
Shigella dysenteriae; orogastric immunization in mice with 69
Shigella dysenteriae antigens; immune response of BALB/c mice to after cyclophosphamide 419
Sjögren's syndrome; anti-Golgi autoantibodies in patients with 123
skin, sheep; and Langherhans' cell migration 79
sperm, human; monoclonal antibodies for 1
spleen; and natural cytotoxic activity 161
spleen cells; passive transfer of 390
squirrel monkeys; as models for evaluating vaccine candidates 169
steroids, sex; effect on proliferation of thymic epithelial cells 193
stochastic gene expression; in eukaryotic cells (Theoretical) 177
streptozotocin; used to induce diabetes in rats 109
substance P; depletion of by capsaicin 230
superantigen binding site; and lupus autoantibodies (Theoretical) 513
surface membrane antigen, leucocyte; characterization of 49

systemic lupus erythematosus; autoantibodies in (Theoretical) 513

T cell epitope, *Mycobacterium leprae*-specific; identified on 70 kDa heat shock protein 215
T cell oligoclonality, gamma/delta; in peripheral blood in rheumatoid arthritis 7
T cell receptor
  association of L-selectin molecule with 319
  and MHC restriction (Review) 447
T cells
  development of (Theoretical) 508
  epitopes of, during oral tolerance and priming 29
  in human breast milk 306
  immune responsiveness, development in chicken 115
  and intradermal infection with vaccinia virus constructs 383
  and killing of tumour cells 275
temperature-sensitive mutants; of Abelson virus 75
thapsigargin; and apoptosis in thymocytes 489
thrombomodulin; internalization of 480
thymic epithelial cell proliferation; effect of sex steroids on 193
thymocyte proliferation; and modulation by CD45 292
thymus
  mouse neonatal, epithelial cell lines derived from 57
  overview of research on (Burnet Oration) 361
thymus-leukaemia antigens; may be the haemochromatosis gene product (Theoretical) 435
tolerance and priming, oral; epitopes in 29
transcription regulation; in eukaryotic cells (Theoretical) 177
transfer, passive; of spleen cells 390
transferrin receptor; and thymus-leukaemia antigens (Theoretical) 435
transformation; of immature B cell lines with temperature-sensitive mutant virus 75
Tritrichomonas foetus; isolation of a neutrophil chemotactic factor from 249
tumour cells
  Meth A, expression of mycobacterial heat shock protein on 415
  T cell killing of 275
tumour necrosis factor; and evolution of viruses (Theoretical) 347
tumour-bearing rats; methotrexate therapy in 43

vaccination
  against *Oesophagostomum radiatum* 333
  of domestic animals (Theoretical) 256
  and testing of adjuvants and carriers in squirrel monkeys 169
vaccinia virus constructs; effects of intradermal infection with 383
vascular endothelial cells; infected by cytomegalovirus (Brief Comm.) 187
vascular permeability; in Japanese encephalitis 200
viruses; evolution of unique immune evasion strategies by (Theoretical) 347

weaning; and mucosal mast cell activation 230

zeta chains; molecular associations of, in natural killer cells 87
zona-free hamster egg; inhibition of penetration of 1
